

THE PWI

THE INSTITUTION FOR RAIL
INFRASTRUCTURE ENGINEERING

Very proud:

PWI ELECTRIFICATION
ENGINEERING DIPLOMA

Where from here?

We have made great progress with making the PWI the home for Electrification Engineers

Already we have a strong offer to those engaged in 25kV Overhead Electrification

We will expand our offer to dc Conductor Rail (third and fourth rail)

Ultimately we will add Tram and Light Rail

We will continue work to make the PWI

Wider Industry issues

Nick has had a sharp focus on trackworker safety, that must continue. We will add electrical safety to that agenda

Climate change and the need to decarbonise the railway is pressing, as President I will place the PWI actively in the debate maximising the institutions influence in the strategic plan

COVID and the world economic climate present great challenges for the railway. I will make the case for rail to be front and centre of the our national transport strategy
